

MA305 - Classwork #9

Real Math into L^AT_EX

A page of mathematics transcribed using LaTeX.

To use LaTeX you have to be willing to search and figure out the right resources or commands that will let it do what you want it to do. You can use resources mentioned in the class or you can just google for them.

1. Choose a page of mathematics from some source. It should contain both text and mathematical expressions with the math both in-line and set apart in display mode. Using LaTeX, reproduce the page to the best of your ability. Try to mimic as much of the features as you can. Hint: Modify the file `cw9.tex` posted at your course Canvas.
2. Submit the scanned copy of the original document you are transcribing (*original.pdf*), the latex source file *cw9.tex* and the output *cw9.pdf*.
